

Spine Labels

Spine labels that stand the test of time.

Canada Label has set the standard for library labels. We understand how libraries work and offer a range of products for libraries big and small. Our spine labels give you all the sizes, material options and printer flexibility you need.

Superior image quality you can depend on.

- > We offer four standard thermal transfer spine labels: two different sizes for the spine of the book and two label sets for the spine and pocket of the book
- > Choose from a flexible polypropylene label material (ts905) that wraps around the spine or a polyester label material (ts505) for the ultimate in durability
- > Both materials can also be bought as a continuous roll of material for use in a thermal transfer printer with a cutter
- > Crisp, easy-to-read label won't fade or smudge over time – Better image quality than dot matrix, laser and direct thermal printers and typewriters
- > Heavy-duty permanent adhesive bonds to a wide variety of book surfaces
- > All four label sizes come packaged in kits (labels and thermal transfer ribbon) and are compatible with our entire line of spine label printers. (Standard and Economy systems as well as our line of standalone Printers)

We've got you covered from A to Z.

Our spine labels are just part of our complete offering of printing solutions for all your labeling needs – from high quality pre-printed labels to sophisticated printing systems.
